CLINMASTERS

MESSAGE FROM CHIEF MENTOR

DR ANMOL S. KALHA
MDS, Col (Retd.) AD Corps

Welcome to ClinMasters!

It gives me immense pleasure to introduce our center for clinical excellence.

We are a team of experienced clinicians who stand committed to enhance your clinical skills.

All our training programs are clinically driven, based on interactive & hands on teaching learning experience – Tell Show and Do Methodology.

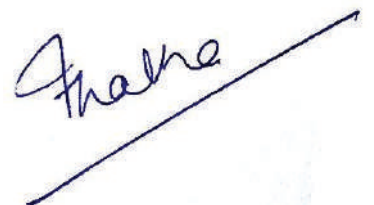

We offer long term & short term courses for young and experienced professionals.

We understand that there is a huge gap between the skill set you need to have as a clinician and what you learn as a part of your college curriculum.

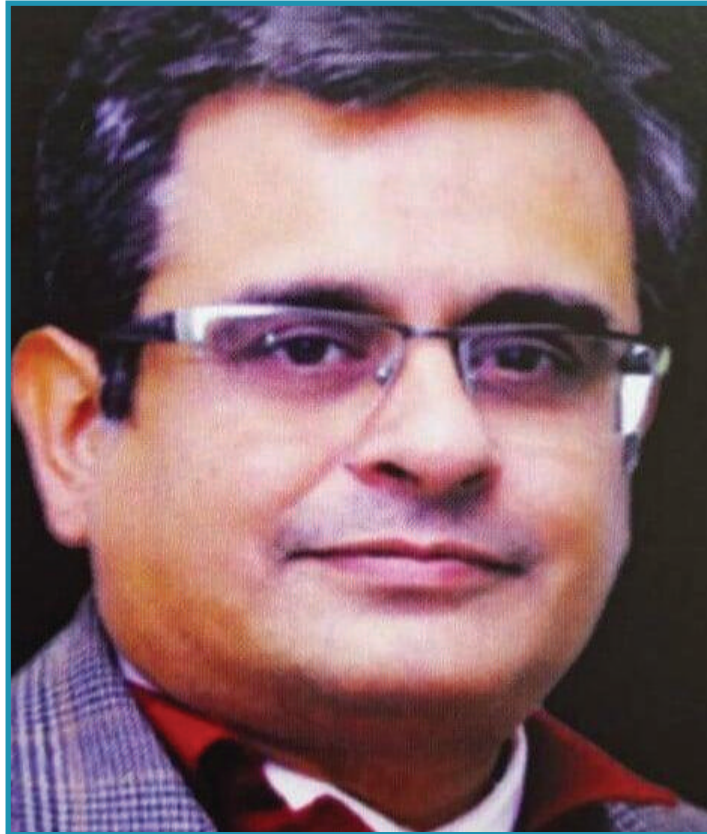

We bridge the gap between what you have learnt/what you know and what you need to know to achieve clinical success in your practice.

We are here to upskill you in contemporary practices and make you ready for a successful career.

We look forward to welcome you.

COURSE LEAD

Dr Sachit Anand Arora

MDS Periodontics

20 years + Experience

Trained 4000+ Dentists

ClinMasters is a part of ITS Education Group which has 25 years + of strong standing in the field of dental education.

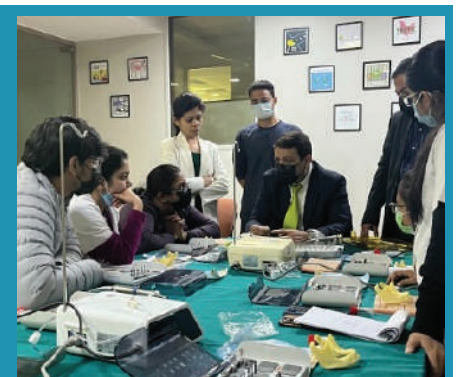

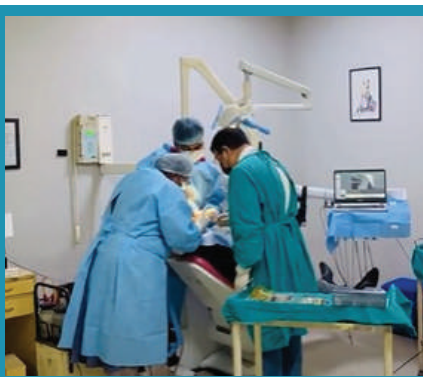

Facilities at ClinMasters

We have a state of the art center with following facilities for course participants:

Highlights of Our Courses

- 100% Clinically driven courses
- Maximum Patient Work
- Nationally & Internationally Acclaimed Clinicians
- Limited Seats for Effective Learning
- Live Demonstrations
- Latest Instruments, Materials & Technologies

LASERS IN DENTISTRY

About The Course

The course prepares you for using LASERS effectively in your dental practice.

Course Learning Outcomes

The participants will be able to handle advanced periodontal procedures in their dental practice.

They will be able to do the following independently & confidently:

- You will know which LASER to buy in your dental practice
- You will know about cases that can be done using soft tissue LASER
- You will know different modes to use in different cases
- You will use soft tissue LASER on animal tissue
- You will know LASER use on patients

COURSE TOPICS

- Clinical discussions / case based approach - types of lasers, working principle biophysical interaction, different wavelengths and their clinical application, difference between contact and non-contact mode, how to avoid charring/thermal damage application and safety, modes of operation, benefits, post-operative instructions, healing of laser treated tissue.
- Laser parameters for different types of soft tissue conditions, how laser power varies from keratinized and non-keratinized tissues.
- You will learn how to use soft tissue LASER in different cases like pericoronitis, gingivectomy, crown lengthening etc.
- Soft Tissue LASER hands on by course participants.
- Participants observe + assist course instructor in 2 LASER cases
